PRODUCT DETAILS

Active Noise Cancellation technology

Hybrid active noise cancellation technology for cancelling a broader range of frequencies. Through the Kygo Sound App you can adjust between different cancellation levels and two modes:

- Ambient mode: 100% of ambient noise and voices, without any active or passive noise cancelling.
- Awareness mode: cancels 50% of ambient sound and make voices more clear.

Touch panel:

Responsive to push or swipe and stable in low temperatures.

Advanced Bluetooth chip: Qualcomm QCC3005

Recommended chip for high quality Bluetooth audio products and noise cancellation technology. A flexible platform that permits headphone software updates and sound equalizer.

High quality memory foam cushions

Forms great around the ear, isolating environment noise and increasing comfort during long periods.

High quality Matt UV coating

Resistant to damage, durable and easy to clean.

Proximity sensor

Thanks to the proximity sensor, the music pauses automatically when you take off the headphones. When you put them back on, the track starts right where you left off. If you remove the headphones and don't touch them again, they will automatically turn off after 15 minutes to conserve battery life.

Kygo Sound App

Experience a new way of customizing your sound. Move the dot through four unique cities, with four unique sound experiences – each with a special meaning to Kygo's journey, so far.
