Stepless dimming screen light for late night screen activities and weakly lit working environments.

PRODUCT DETAILS

Stepless dimming screen light

Our stepless dimming screen light has been designed with your eyes in mind - offering a perfect solution for late night screen sessions or when working in low light environments.

Simply connect the light to your screen and power via USB. The special dial provides stepless dimming, allowing you to adjust the brightness of the lamp to match your environment. This is perfect when you need to work late without disturbing others. The Baseus i-wok technology provides perfect illumination for your immediate vicinity without disturbing people in your environment.

In addition, the light is perfect for gaming or late night entertainment so your eyes won't be exposed to poorly lit monitors.

Your eyes are vulnerable to the effects of working in conditions that are either too bright or too dark. We have all felt the effects of, for example, using a laptop in a darkened room. i-wok takes those negative effects away and goes easy on your eyes.
