The combination particle + carbon filter removes household odors, chemicals, gases and airborne particles like pollen, dust and viruses with Blueair's HEPASilent™ technology.

PRODUCT DETAILS

An award-worthy combination

The combination particle + carbon filter removes annoying household odors, chemicals, and gases, as well as 99.97% of airborne particles, like pollen, dust, viruses, and more with Blueair's HEPASilent™ filtration technology.

Less dense filters make the difference

Our unique HEPASilent™ filtration technology allows our filters to be less dense. Less dense filters require less air pressure— resulting in quieter and more energy efficient air purifiers.

Remove allergens & germs

The particle filter layer helps to minimize the airborne particles that can trigger allergy symptoms, including pollen, dust, mold spores, pet dander, viruses, bacteria, and fine smoke particles.

Remove household odors

A layer of activated coconut carbon absorbs light gases, including volatile organic compounds (VOC), smog, chemicals, and annoying household odors from pets, smoke, and cooking.

Recyclable

This filter is recyclable, so the only thing you're adding back into the environment is clean air. Please check your local recycling facilities for availability.

6-month filter life and easy replacement

To maintain optimum performance, we recommend changing your filter about once every 6-months

when used 24 hours a day. When it's time to replace your filter (about every six months), start by unplugging your air purifier. Turn the top portion of the air purifier counterclockwise to remove. Take out the old filter and vacuum away any dust on the inside. Insert the replacement filter, replace the top/cap and plug back in. Easy.

Traps particles for good
The filter structure traps even the smallest particles and resists clogging to maintain maximum airflow.
