PRODUCT DETAILS

Form & functionality

The pre-filter fabric ensures a longer life of the main filter by capturing large airborne particles such as dust, lint, pollen and pet hair. In addition, the colour can be individually adapted to the room.

HEPASilent technology

Blueair's HEPASilent™ filtration captures 99.97% of all airborne particles down to a minimum size of 0.1 microns. HEPASilent technology combines the best features of electrostatic and mechanical filtration. The revolutionary combination of advanced filter media and an encapsulated particle ionisation chamber ensures that the Blueair air purifier delivers far better results than mechanical or electrostatic filtration alone.

Change in colour

Add surprising colour accents or complement the room's décor! The filter is available in five different shades: Arctic Trail, Winter Reed, Archipelago Sand, Aurora Light and Night Waves.

Easy cleaning with a Hoover

For quick cleaning between washes, a Hoover with brush attachment removes dust and dirt from the outside of the pre-filter.

Machine-washable

The pre-filter is designed for long-term use. For a thorough clean, it can be washed in the washing machine on a gentle cycle at low temperature. Simply hang it up to dry when done.

Discreet power cable

The power cord is attached to the fabric pre-filter with a hidden Velcro strap, keeping it close to the body of the air purifier and out of sight.

Inspired by nature
The new high-quality fabric pre-filters have been designed in an earthy colour palette inspired by Blueair's Swedish heritage and the landscapes of Scandinavia.
