PRODUCT DETAILS

Hombli Smart Bluetooth Bridge – Hub for wireless sensors

The Hombli Smart Bluetooth Bridge gives you the possibility to add smart sensors to your Hombli smart home system. It is literally the bridge between your Wi-Fi network and Bluetooth sensors, such as motion sensors or contact sensors.

Instant notifications

Receive notifications on your phone as soon as the sensors come into action. This way you always stay informed of what's happening no matter where you are.

Easy installation

Use the Hombli app to connect the Smart Bluetooth Bridge directly to your Wi-Fi network (2.4GHz). This hub uses energy-efficient, secure and reliable Bluetooth technology to connect to sensors.

Expand with motion sensors

With the Hombli Smart Bluetooth PIR Motion Sensor, you will receive notifications on your phone as soon as movement is detected. This sensor can also be used as a trigger for scenarios. This gives you home automation options, such as automatically switching on smart lights when movement is detected.

Expand with contact sensors

With the Hombli Smart Bluetooth Contact Sensor, you will receive a notification on your phone as soon as a door/window is opened or closed. This sensor can also be used as a trigger for scenarios. This gives you home automation options, such as switching on smart lights when you open a door or receiving a notification when a window is left open while it rains.
