PRODUCT DETAILS

Innovation and design awards

XGIMI is devoted to providing innovative products with outstanding quality and has won 31 international awards in 6 years. Brand efforts are highly recognized by the industry and millions of users.

The brightest ever portable projector

True 3D and Full HD projection with a physical resolution of up to 1920x1080. Combined with 600-800 ANSI Lumens of brightness, Halo has become the brightest 1080p portable projector available. It completely tears the toy tag off a Pico Projector, offering the best audio-visual experience for a projector of its size.

True Full HD

XGIMI adopts the latest DLP technology, allowing the Halo projector to provide a sharper, crisper image with its physical resolution of 1920x1080 pixels. It projects in true Full HD and is 225% clearer than mainstream 720p projectors. Halo also supports video formats of up to 4K Ultra HD—it provides the sharpest image you will ever see from any portable projector.

HDR decoding

HDR technology enhances contrast ratio and allows the image to show rich details no matter if it is in a bright or dark environment.

Unplug your giant display

The XGIMI Halo is capable of turning any white wall into a 40-200+'' large screen. Halo uses DLP cinema-grade (active shutter 3D imaging) technology, which provides a whole new viewing experience with XGIMI's active shutter 3D glasses. With the Android TV™ entertainment system, great Harman Kardon sound and a built-in power battery, you can enjoy the ultimate home cinema experience with your loved ones wherever you want.

Premium sound by Harman Kardon

To provide reverberating, theater-quality sound, the Halo projector partnered up with Harman Kardon to create a customized set of two 5W speakers. Tuned by Gold Ear Philosophy, Halo's Harman Kardon

speakers produce vibrant, accurate and beautiful sound, culminating in a superb audio-visual experience. The XGIMI Halo can also be used alone as a set of high-quality Bluetooth speakers.

Android TV™

Halo is powered by the Official Android TV™ (upgradable). With Android TV™, you can access all the contents you love, exactly how you want it. The device works with Google Play Store, and with 5000+ native apps, Android TV™ opens a door to a whole world of entertainment for you. Halo's multilingual user interface supports 52 different languages.

Voice assistance

Press the mic button on your remote and say "Hey Google" to quickly find the latest blockbuster, check the score of the big game or dim the lights — all without leaving your seat or interrupt what you're already watching.

Effortless setup

The projector features a built-in rapid 10,000+ point auto-focus function and professional high-definition camera. The image becomes automatically focused upon turning on the projector instead of via manual operation.

Four-point Keystone correction

Halo was built with extensive (vertical +/-40° and horizontal +/-40°) 4-point keystone correction software, which is normally built into high-end professional projectors. It provides users with an optimal image from virtually any angle and eliminates many setup hassles.

High-capacity battery for portability

The built-in large capacity battery ensures excellent portability. Users can watch up to 3.5 hours of video or listen to 5 hours of music on a single charge.

Ultra-long lifespan

Halo has a highly efficient LED light source, allowing its projections to stay perfectly crisp, clear and bright for its entire LED lifespan of 30,000 hours. That's enough for 8 hours use every day for the next ten years without needing to change the lamp. In fact, it consumes less than half the power of a traditional LCD TV.

Smooth and stable

Halo boasts the brand new Amlogic T950X2 TV chip, MaliG31 GPU, with 2GB RAM and 16GB ROM, which provides the most advanced image quality as well as more intelligent and faster automatic focus adjustment. The new high-performance processor's speed will blow you away!

Multiple ports

Enjoy your favorite content by connecting to your own external devices, such as HDMI and USB, or wirelessly over Chromecast and Bluetooth. Play XBOX or Nintendo Switch on Halo's giant screen and experience immersive games like never before.

Key features

- True 1080P resolution, support 4K
- True cinematic projection with up to 200 inches display
- 600 - 800 ANSI Lumens
- Official Android TV™ system with 5000+ apps
- Premium sound by Harman-Kardon
- Keystone correction projection
- Mirroring from your phone via Chromecast
- Voice control with Google Assistant
